Software Engineer - Backend (Python)
Demo Cloud Solutions, Bengaluru

About the role
You will design and build backend services that power our analytics platform.

Responsibilities
Build and maintain REST APIs and backend services.
Write clean, tested code and take part in code reviews.
Deploy services using containers and CI/CD pipelines.

Requirements
Strong programming skills in Python.
Experience with FastAPI or Django.
Good knowledge of SQL and PostgreSQL.
Hands-on experience with Docker and Git.
Understanding of data structures and algorithms.
B.Tech/B.E. in Computer Science or related field, 0-2 years of experience.

Nice to have
Experience with Kubernetes and AWS.
Familiarity with Redis or other caching systems.
